

## **\*\*NOTICE\*\***

### **North Haven Propane Trip Information**

Trips are scheduled on an as-needed basis using available truck reservations 7 to 10 days in advance of the trip.

Once a trip is scheduled, the information is posted in the following areas: North Haven and Rockland ferry terminals, on the ferry, North Haven Grocery, Post Office, Waterman's Community Center and on the Town of North Haven website and Facebook page.

The current Coast Guard regulations allow the Capt. Neal Burgess 50 passengers and the ferry holds approximately 7 regular size vehicles with the propane truck. **All vehicle engines must be turned off on the ferry when propane is on board.**

The following guidelines are in effect for passengers when propane is on the ferry run from North Haven (Please note that all terminals may have a different system based on what works best for their location):

\*Drivers and passengers that are in vehicles that stand a reasonable chance of fitting on the ferry before loading time (7:15am) are counted first towards the allowance of 50 passengers (vehicles in the stand by line at #5 and higher do not have a reasonable chance of fitting on the ferry with the propane truck and passengers in those vehicles wishing to take the 7:30am ferry should queue up in the passenger line). Vehicles will only be allowed as many passengers as there are seatbelts for that vehicle.

**\*Walk-on passengers will queue up to the right of the ferry ramp behind the stanchions on a first-come, first-serve basis. Only passengers who will be boarding the ferry will be in the queue.**

\*Walk-on passengers will stay queued in the line until the vehicles are loaded onto the ferry and we have an accurate count for the allowance.

**Current 1.6.16**
