North Haven Comprehensive Plan

Land Cover

ABOUT THIS MAP

This map, required for the town's Comprehensive Plan, was created from Landsat satellite imagery. The Landsat Project is a collaboration between the USGS and NASA to gather Earth resource data using satellites. The images used were for this map were taken between 1999-2001; as a result, the land cover you see on the island today may vary significantly. See http://landsat.usgs.gov/ for more information on Landsat.

The roads and coastline data are Geographic Information Systems (GIS) shapefiles originating from the State of Maine Office of GIS.
